

Stop threats, cut the noise, and deliver GenAI-powered email protection.

Instantly checks every message, link, and attachment for risk.

GenAI and AI models assess every message, checking for spoofing, phishing, and threats hiding in attachments. It flags distractions like graymail and keeps your domains in check—giving you smarter security without the extra effort.

Coach users to make smart decisions in real time.

Periodic security training often falls short with distracted, busy users. Email Assistant provides continuous coaching, helping users make safe choices on any device.

Stay secure.

Outsmarting malicious actors takes nothing less than agility and ceaseless innovation. Through GenAI, AI, and machine learning, catch what others miss.

Computer Vision

Render every email and applies computer vision algorithms to "see" each email as the human recipient will. This helps identify brand impersonation attempts.

Text Understanding & Conversation Analysis

Incorporates language understanding so it can "read" each email and understand its intent. Providing the ability to identify scams that simple pattern matching cannot.

QR Code Detection

AI-driven QR code detection technology scans emails for QR code imagery and decodes these images to determine if the encoded URL is safe.

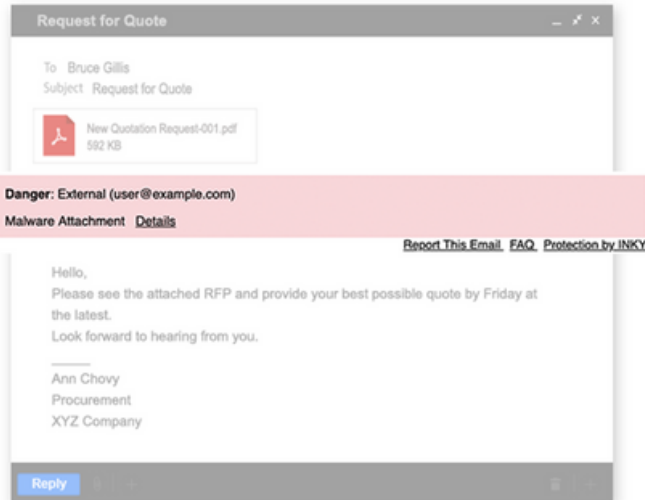

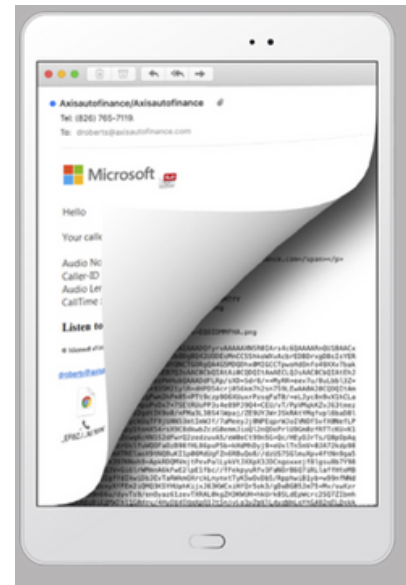

Approximate Matching Engine

Proprietary approximate matching engine finds brand indicative and scam indicative text, despite attacker cloak attempts like zero font and other tricks.

Inbound Email Protection

Over two dozen computer-vision and text analysis models see an email much like a person does — only better. Our AI spots fakes, checks if senders are legitimate, and flags suspicious emails like brand impersonation and phishing before you ever click.

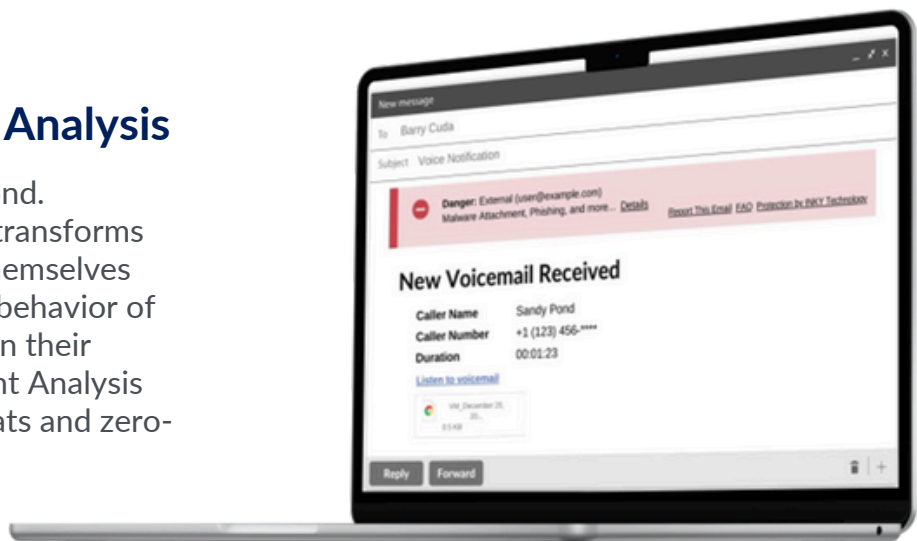

Internal Email Protection

Compromised email accounts let the bad guys in. Builds dynamic profiles or behavior models of originating senders with software modules using stylometry and social graphing. As the models grow, Uses anomaly detection to filter out and block impersonation attempts.

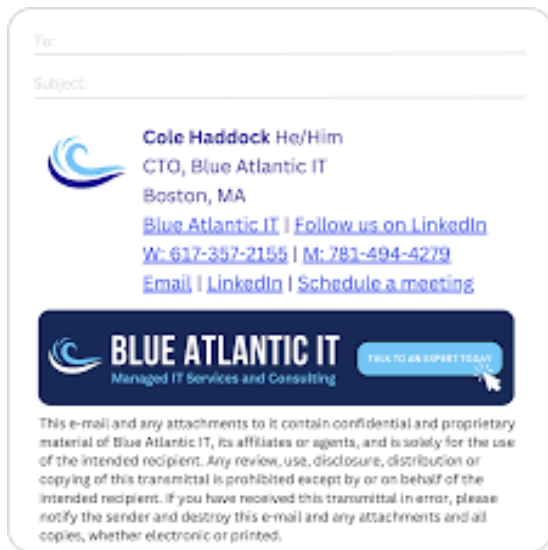

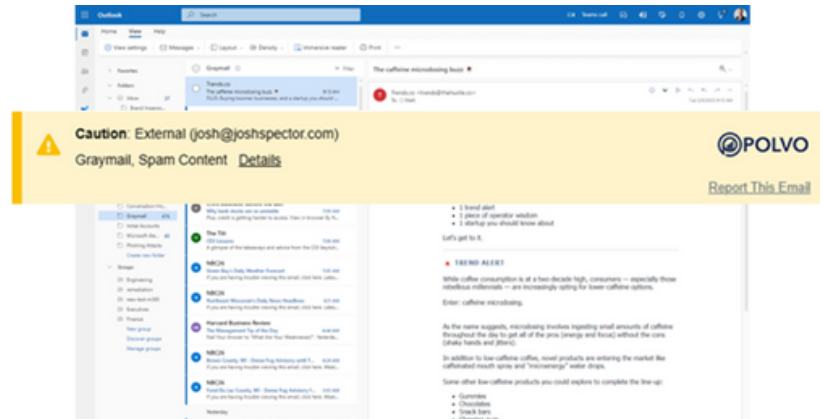

Advanced Attachment Analysis

Deep analysis in less than a second. Advanced Attachment Analysis transforms the way organizations protect themselves from malware. By analyzing the behavior of software components rather than their signatures, Advanced Attachment Analysis can detect known malware threats and zero-day attacks.

Graymail Detection

Graymail is bulk email you opted into but may no longer want. Our Generative AI-powered protection flags graymail, applies warning banners, and routes it to a custom folder for distraction-free review.

Centralized Signature Management

Simplify the process of creating and distributing email signatures to all staff members. It is easy to stay on top of updates from legal or marketing by making changes instantly across the entire organization.

ADVANCED FEATURES

- Inbound Email Protection
- Internal Email Protection
- Advanced Attachment Analysis
- Graymail Detection
- Centralized Signature Management
- Email Anomaly Detection

- URL Time-of-Click Protection
- Advanced Computer Vision
- QR Code Defense
